

# Configuration

Once you've installed Shibboleth 2, you'll have to configure it for your environment. The configuration topics below are arranged by software component. A few of the most used topics are listed here but others may be found by following the **More...** link for each component.

If you have a question that isn't addressed here, please check the [list archives](#), and if necessary send a new message to the [user support mailing list](#).

<b>Identity Provider (IdP)</b>
