

IdPFilterRequirementAuthenticationMethodString

Authentication Method Attribute Filter Matching Rule

This matching rule evaluates to true if the method used to authenticate the user matches a given string.

Define the Rule

This rule is defined by the element `<PolicyRequirementRule xsi:type="basic:AuthenticationMethodString">`, for policy requirements rules, and `<PermitValueRule xsi:type="basic:AuthenticationMethodString">`, for permit value rules, with the following attributes:

- **value** - the string value to match
- **ignoreCase** - a boolean flag indicating whether the match is not case-sensitive

Example Policy Requirement Rule using the AuthenticationMethodString Match Function

```
<PolicyRequirementRule xsi:type="basic:AuthenticationMethodString" value="urn:oasis:names:tc:SAML:2.0:ac:classes:PasswordProtectedTransport" />
```
