## Shibboleth Development Center

Welcome to the Shibboleth Development Center. The content found here is mostly intended for people who:

- wish to understand how the Shibboleth Project is organized and governed
- are interested in contributing to the project in some way
- wish to know about the current developmental roadmap and status
- wish to understand how the software works at deep technical level

We also have a new developer [blog](#) you can track.

This page is **not** for people who are looking for:

- information about how to configure the software, refer to the [general documentation](#) for the particular product you're working with
- trying to evaluate if the software will meet their organization's uses cases (unless those use cases are actually about writing plugins and extending the software)

### General Information

<a href="#">Project Organization</a>	Information about the project's organization, membership, governance, and process.
<a href="#">Product Versioning</a>	Information about the versioning policy used by the project for our releases.
<a href="#">Project Roadmap</a>	The Shibboleth project development roadmap.
<a href="#">Technical Specifications</a>	These are the technical specifications which various Shibboleth products support in full or in part.
<a href="#">Supported Protocols</a>	Lists which protocols, defined by the technical specification referenced above, are supported by Shibboleth products.
<a href="#">Infrastructure Information</a>	Information about Shibboleth Infrastructure, includes terms of use information.

### Developer-Oriented Information

<a href="#">Source Code Access</a>	This document provides information on how to get at the source for all the Shibboleth projects.
<a href="#">Developer Call Notes</a>	Notes from the Shibboleth developer calls.
<a href="#">Java Developer's Guide</a>	General guide for Java developers as they work on all the Java-based Shibboleth projects.
<a href="#">C++ Developer's Guide</a>	General guide for C++ developers as they work on all the C++-based Shibboleth projects.
<a href="#">EDS Product Release Process</a>	Documentation describing the release process for the Embedded Discovery Service
<a href="#">Git</a>	Documentation for the transition from Subversion to Git.
