

Git

The Shibboleth project is migrating its source code repositories from the [Subversion](#) centralised version control system to the more modern and decentralised [Git](#), see [INFRA-106](#) and its subtasks.

The following detailed topics are available:

- [How to access the Git repositories](#)
- [The status of the each repository within the conversion project](#)
- [Some notes about the conversion process](#)
- [How to work with Git in the Shibboleth project](#)

The [Source Code Access](#) page provides information about how to access each repository, whether converted or not.
