

## 4 Developer Information

The Metadata Aggregator is a multi-module Maven project held in the following repository:

[git://git.shibboleth.net/java-metadata-aggregator](https://git.shibboleth.net/java-metadata-aggregator) or <https://git.shibboleth.net/git/java-metadata-aggregator>

Check out an appropriate branch (e.g., `master`) of this project out into Eclipse and then use `File | Import` to convert each module into its own Eclipse project.
