

EclipseDevEnv

Developing in Eclipse

These instructions assume you have JDK 1.5 and [Eclipse](#) 3.1+ already installed and running.

Preparing Eclipse

1. Install the [JavaSVN](#) plugin using the Eclipse Update URL: <http://tmate.org/svn/>
2. Install [Subclipse](#) using the Eclipse Update URL: <http://subclipse.tigris.org/update>
3. Restart Eclipse
4. In the **Preferences** windows, **Team -> SVN** pane, ensure that the SVN interface is set to "JavaSVN"

Checking Out a Project

1. Open the Subversion (SVN) Perspective
2. Add a new SVN repository using the URL `https://svn.middleware.georgetown.edu/[REPO_NAME]`
3. Expand the newly added repository and right click on trunk
4. Select "Check Out As Project"
5. Switch back to the Java Perspective
