

RegistrationAuthorityConfiguration

Overview

The `RegistrationAuthority` type is a `PolicyRule` that returns true if the entity is registered by a particular registrar or one of a set of registrars. Matching occurs against the `RegistrationAuthority` XML attribute value on the `<mdrpi:RegistrationInfo>` element (if any).

Schema Name

The `RegistrationAuthority` type is defined in the `urn:mace:shibboleth:2.0:afp` namespace, the schema for which is located at <http://shibboleth.net/schema/idp/shibboleth-afp.xsd>

The deprecated `saml:RegistrationAuthority` type is defined in the `urn:mace:shibboleth:2.0:afp:mf:saml` namespace, the schema for which is located at <http://shibboleth.net/schema/idp/shibboleth-afp-mf-saml.xsd>

Attributes

One attribute must be specified:

- `registrars`
 - A required attribute that specifies a space-separated list of registrar IDs

Child Elements

None

Example

Apply this rule if the SP is a [REFEDS Research & Scholarship](#) service registered by *MyFederation* with the given registrar ID:

```
<PolicyRequirementRule xsi:type="AND">
  <Rule xsi:type="EntityAttributeExactMatch"
    attributeName="http://macedir.org/entity-category"
    attributeValue="http://refeds.org/category/research-and-scholarship" />
  <Rule xsi:type="RegistrationAuthority" registrars="http://my.federation.org" />
</PolicyRequirementRule>
```
